

*Skin Cancer often occurs due to over exposure to sunlight or getting sunburnt. There are different types of skin cancer.*

*Below are possible signs of Skin cancer. Please contact your GP if you have a skin mark / mole that has:*

- *changed in size*
- *irregular shape*
- *irregular / uneven border*
- *irregular colour (has different colours within it)*
- *largest diameter 6 mm or more*
- *inflammation – crusts / bleeding/non-healing*
- *oozing*
- *change in sensation (feels different – tingles / itches).*
- *Dark coloured stripe under the nail*

*If you notice anything unusual on your skin that does not go away after 4 weeks, show it to your doctor. It might help to take a photograph of anything unusual so you can check for any changes.*
